

MICROWARE C COMPILER USER'S GUIDE
Table of Contents

CHAPTER 1 - THE C COMPILER SYSTEM

Introduction	1-1
The Language Implementation	1-2
Differences From The K & R Specification	1-2
Enhancements And Extensions	1-3
The "Direct" Storage Class	1-3
Imbedded Assembly Language	1-4
Control Character Escape Sequences	1-4
Implementation-Dependent Characteristics	1-5
Data Representation and Storage	1-5
Register Variables	1-5
Access to Command Line Parameters	1-6
System Calls and The Standard Library	1-7
Run-Time Arithmetic Error Handling	1-8
Achieving Maximum Program Performance	1-9
Programming Considerations	1-9
The Optimizer Pass	1-9
The Profiler	1-9
C Compiler Component Files and File Usage	1-10
Running the Compiler	1-11
Compiler Option Flags	1-13

CHAPTER 2 - CHARACTERISTICS OF COMPILED PROGRAMS

The Object Code Module	2-1
Memory Management	2-4
C Program Memory Map	2-4
Compile Time Memory Allocation	2-6

CHAPTER 3 - SYSTEM CALLS

System Calls	3-1
--------------	-----

CHAPTER 4 - STANDARD LIBRARY

Standard Library	4-1
------------------	-----

APPENDIX A - COMPILER ERROR MESSAGES	A-1
--------------------------------------	-----

APPENDIX B - COMPILER PHASE COMMAND LINES	B-1
---	-----

APPENDIX C - INTERFACING TO BASIC09	C-1
-------------------------------------	-----

APPENDIX D - THE RELOCATING MACRO ASSEMBLER	D-1
---	-----
